

ARFAN AHMED FAHIM

Computer Science & Engineering | BRAC University

Phone: 01330044020

Email: arfanahmedfahim832@gmail.com

LinkedIn: arfan-ahmed-fahim GitHub: Fahim7600

Location: Dhaka, Bangladesh

Career Objective

Computer Science & Engineering graduate with hands-on experience in data analysis, machine learning, database management, and full-stack development, complemented by strong analytical and problem-solving skills. Eager to join bKash's bNext internship in the Product & Technology team to contribute to real-world projects through dashboard development, automation, and data-driven decision support, while bringing a structured, detail-oriented approach that also translates well to Supply Chain Management's process and data optimization needs.

Personal Information

Date of Birth	07/11/2002	Gender	Male
Nationality	Bangladeshi	Religion	Islam
Marital Status	Unmarried	Blood Group	A+

Present Address: Road No: 5, Block: E, Aftabnagar, Dhaka

Permanent Address: T&T Road, Nabinagar, Brahmanbaria

Education

Degree / Level	Institution	Result	Year
B.Sc. in CSE	BRAC University	CGPA: 3.72 / 4.00	2026
HSC	Dhaka City College	GPA: 4.67 / 5.00	2019
SSC	Nabinagar Pilot Government High School	GPA: 5.00 / 5.00	2017

Undergraduate Thesis: *CNN-Based Hybrid Defect Detection Framework for Multi-Domain Industrial Quality Control*

Evaluated a hybrid deep learning framework on 16,690 images across 3 manufacturing domains, comparing 4 transfer learning baselines against CustomDefectNet — a novel multi-task architecture incorporating Squeeze-and-Excitation and Coordinate Attention mechanisms. CustomDefectNet achieved 93.53% defect accuracy; ResNet50 led binary discrimination at 98.08% (AUC: 0.9976); all models operated at under 20 ms per image, making the system viable for real-time industrial deployment.

Technical Skills

Languages	Python, SQL, JavaScript, C, HTML, CSS
Data & BI Tools	Looker Studio, Microsoft Excel (pivot tables, charts, data analysis), Power BI
Frameworks & Stack	MERN Stack (MongoDB, Express.js, React, Node.js), Django, Flask, REST API Design
Databases	PostgreSQL, MySQL, MongoDB
AI & Automation	Claude, Kiro, Perplexity, Antigravity, Python scripting, data cleaning & validation pipelines
Concepts	Data Analysis, Statistical Thinking, Machine Learning, Deep Learning, OOP, Data Structures
Dev Tools	Git, GitHub, VS Code, Google Workspace

Projects

MigrateRight – Safe Migration & Overseas Worker Support Network

GitHub:

github.com/rahim2025/MigrateRight

Aim: Millions of Bangladeshi migrant workers are exploited by unverified recruitment agencies every year, with little access to transparent fee structures or emergency resources. MigrateRight addresses this critical social problem by creating a trustworthy digital platform where workers can make informed decisions before going abroad.

What it does: A full-stack MERN platform that allows Bangladeshi migrant workers to verify recruitment agencies, compare fee structures across different destinations, and access emergency support services. The platform supports 4 distinct user roles (worker, agency, admin, and emergency contact), implements geospatial search to find local resources, uses JWT authentication for secure access, applies rate limiting to prevent abuse, and features a community review system where workers can share experiences. The project spans 27 commits of active development.

PetSphere – Pet Management & Community Platform

GitHub: github.com/2ManyFaces/PetSphere

Aim: Pet adoption, care, and lost-and-found management in Bangladesh are fragmented across separate platforms and informal social media groups, making the process inefficient and unreliable for both pet owners and adopters. PetSphere consolidates these needs into one unified community platform.

What it does: A MERN-based platform that unifies pet adoption, care tracking, and lost-and-found management into a single ecosystem. It comprises 8 functional modules including pet discovery with advanced filtering, detailed pet profiles, adoption applications, real-time chat between adopters and owners, and push notifications for updates. The backend leverages a flexible MongoDB document store to handle diverse pet data across all modules.

Cineplex – Online Cinema Booking Platform

GitHub: github.com/Hr-D-Luffy/Cineplex

Aim: Traditional cinema ticketing involves long queues, seat conflicts, and double-booking issues that frustrate customers. Cineplex aims to modernize the cinema booking experience in Bangladesh by providing a reliable online reservation system that eliminates these pain points.

What it does: A Flask and MySQL cinema booking system with a carefully designed relational schema covering movies, seat layouts, user accounts, and booking records. The system implements SQL transaction-level conflict prevention to handle concurrent reservations safely, ensuring that no two users can book the same seat simultaneously. It provides a complete end-to-end booking flow from movie selection to seat confirmation.

DevPulse – Developer Productivity & Analytics Platform

GitHub:

github.com/Fahim7600/Assignment2_DevPulse

Aim: Developers and teams often lack a unified way to track coding activity, productivity trends, and project health, relying instead on scattered tools and manual logs. DevPulse aims to consolidate this into a single platform for clear, data-driven visibility into development work.

What it does: A full-stack platform that tracks and visualizes developer productivity metrics, providing structured insights into coding activity and project progress through clean dashboards and organized data views.

Co-Curricular Activities

Panel Member · BRAC University Response Team (BURT)

2022 – 2025

BURT is a student-led humanitarian and emergency response organization at BRAC University. As a Panel Member for three years, significant contributions were made across crisis management, community welfare, and organizational leadership:

- Coordinated blood donation campaigns and managed an emergency blood supply network connecting donors with patients in need across Dhaka, ensuring timely access to critical medical resources.
- Organized Ramadan Iftar drives and winter clothing donation programs, overseeing volunteer allocation, logistics planning, and distribution to underprivileged communities.
- Led crisis response operations during national emergencies including floods and slum fire breakouts, as well as tree plantation drives, mobilizing and coordinating teams effectively under high-pressure conditions.
- Conducted campus awareness programs on health and social issues, including breast cancer awareness campaigns and free blood donation drives, promoting student engagement with public health initiatives.
